

ENVIRONMENTAL POLICY

The company's management has formulated an environmental policy that forms the basis for how the concept of the environment is intended to be understood by the company's leadership.

Aluflex shall contribute to long-term sustainable development to the extent that we have the knowledge, ability, and resources to do so.

To achieve this, we need to:

- Collaborate with suppliers who possess strong environmental expertise and provide us with information about the environmental impact of our products.
- Actively work to ensure that environmental considerations are integrated into our business models.
- Be able to guide our customers in reducing their carbon footprints.
- Optimize and develop the use of materials so that waste generation is minimized.
- Work with energy-efficient solutions and efficient logistics.
- Promote resource efficiency in business travel.
- Maintain the knowledge and awareness needed to ensure compliance with both customer environmental requirements and regulatory environmental obligations.
- Stay ahead by working proactively with continuous environmental improvements.
- Environmental targets: Aluflex shall reduce its carbon emissions by 50% annually through 2030.
